VISIT SUMMARY

Chief Complaint

Bilateral knee pain for approximately 10 days.

History of Present Illness

Pain is worse when climbing stairs and improves with rest. No recent injury, swelling, fever, or morning stiffness reported.

Examination Findings

Mild tenderness over both knee joints. No visible swelling or erythema. Range of motion is preserved.

Provisional Diagnosis

Bilateral knee pain, likely mechanical in origin.

Medicines

1. Paracetamol | 500 mg | Twice daily as needed | 3 days
2. Topical analgesic gel | Apply a thin layer | Twice daily | 5 days

Advice

Avoid prolonged stair climbing. Apply a warm compress and continue gentle range-of-motion exercises.

Follow-up

Review in 1 week if symptoms persist or sooner if pain worsens.

DRAFT PRESCRIPTION

1. Paracetamol

Dosage: 500 mg | Frequency: Twice daily as needed | Duration: 3 days

2. Topical analgesic gel

Dosage: Apply a thin layer | Frequency: Twice daily | Duration: 5 days
